

INTRODUCTION

Our imaginations of the world and our consciousness determine mainly the criteria the economic rules are deduced from. But the globalisation of the world economy reveals the failure of these rules. Nothing remains as before after the actual financial and economic crisis. More and more people are excluded from the use of the social structures which are factors of production as well.

A Seven-Level World View as an artificial transformation of a philosophical idea opens new horizons. It helps to recognize how the "One" can explain everything or how the logical structure of the universe can be thought. The author provides a new imagination of the world: The seven levels form a circle. Therefore an endless "Voyage through the Universe" arises.

The Studies of Economic Change as an example of a science offer a different perspective. Not only philosophers should be concerned by a lack of conviction or trust for their intellectual amusement. Even supposed economic laws have to be proven critically. You will see how chains of causation which are accepted as true can be switched to the opposite and what consequences have to be deduced.

VALUE

Social active citizens with interest in philosophy, art, science, politics, or economy are able to benefit from the value of this work:

- visual illustration of a philosophical idea
- model of the universe consisting of Nothing and Oneness
- animation as infinite loop: „The Voyage through the Universe“
 - imagination of a common genesis of all religions
- presentation of a sustainable economic policy without growth

FROM THE GENERAL ...

A Seven-Level World View

The sensual experience

The "Seven-Level World View" is the artificial realization of a philosophical idea at the borderline between science and art as well as theory and practice.

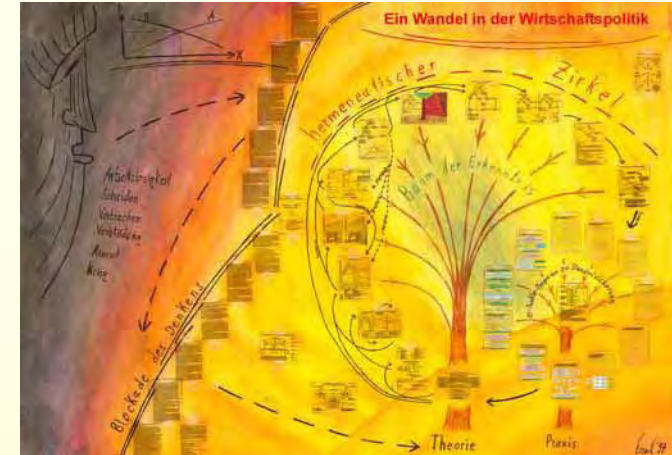

Experience how the binary code leads to scientific studies, how these lead to a science, how this leads to the system of science, how this leads to the history course, how this leads to the world spirit, and how this leads to the universe, which is based on "All and Nothing" (Leibniz).

EXAMPLE

TO THE PARTICULAR ...

Studie of Economic Change

The intellectual challenge

The „Studies of Economic Change“ give the evidence for the banal and absurd sounding theses that the working hours must be reduced and the wages must be increased.

Declining economic growth rates due to the "law" of diminishing marginal utility meet with increasing labour productivity rates due to the idea of the evolution theory. The alternatives are maximum welfare in a leisure-oriented society or full employment connected with poverty.
